**Dissemination of the project in Spain**

The latest EnEf and innovative operators in their sectors publish separate publications organized under categories of energy efficiency, buildings, and energy efficiency.

- **Conference of Energy Renovation, risks and costs**
- **Conference of energy innovation and efficiency in buildings**

The second conference took place in the headquarters of ENELSA on June 26-27. The theme of the seminar was to promote awareness in companies that is most applicable to the building sector and to provide a first experience in a 3D-simulation energy efficiency in buildings.

**Access to learning platform EnEf**

Through the website of the project, you can access the learning platform and a 3D simulation tool. The Learning Platform:

**PILOT TEST OF PLATFORM**

Now, the learning platform is being used. You can see what the users are doing in the platform and receive a questionnaire.

**THE LEARNING PLATFORM**

The learning platform has been developed to help the professional development in the sector. It is the result of the training developed by Energy Forum, following extensive work in the field and research.

**EnEf Learning Platform**

With the creation of the learning platform EnEf is creating a European area of learning buildings.

The development is understood as the set of learning activities that are developed by companies, workers or their organizations, aimed at both improving skills and the learning of workers employed, which allow the competitiveness increased performance of companies with the national sector being.

Training is understood as a process of acquisition and development of the participants' capacity to their profession, their interest or interest that eliminates the differences between what an employee can take from their skills, experience and skills acquired and what is required for their occupation.

Activities in the process of assessment design and creation of a Company Training Plan, include the creation of a Training Course, based on the latest European Union, based on the latest EnEf project objectives, among which is the creation of an online learning platform.

- To use as their methodologies and build-up training modules in line with European standards promoting energy efficiency in buildings.
- To develop an innovation training approach consistency with European standards.
- To create virtual elements and virtual simulations being able to visually show the different models about energy efficiency and their impact on energy saving environmental monitoring.
- To provide examples and exchange of their practices.
- To assist in the dissemination of the information and promote.

It attempts to address the lack of knowledge of business and construction agents using new methodologies and the creation of training modules according to European standards, trying to capture the opportunities of the different applications in different participating countries.
